STEVEN GANDHAM

Software Engineer · Backend Systems & Cloud Architecture for Mission-Driven Impact

✉ stevengandham@gmail.com ☏ (805) 660-3757 in linkedin.com/in/steven-s-gandham ⌥ github.com/stevengandham

MISSION

Backend engineer with **5 years building enterprise-grade systems** – Node.js, AWS serverless, event-driven architecture, agentic AI – for products serving **1.5M+ customers**. I believe AI will **solve the "software engineering problem"** – humans maintaining, revising, and prompting systems rather than hand-writing every line – and I build toward that future today: this year I've shipped **Claude Code Skills and agentic workflows** that force-multiply my team's engineering and compliance initiatives. AI is a blank canvas; the technology isn't the art, what you choose to build with it is. Big tech doesn't need my help – the underserved clinic, the community college, the local government office does – and I'm seeking a team that believes the most important software hasn't been written yet.

EXPERIENCE

Software Engineer II · Realtor.com

Jul 2021 – Present

- Built **Claude Code Skills** that automatically audit company cloud and infrastructure resources against compliance requirements, replacing manual review cycles across the team.
- Designed **agentic engineering workflows** (Claude Code skills/commands) that carry a security or feature ticket from creation through implementation, review, and production deployment – force-multiplying delivery for the broader engineering org.
- Built and enhanced **7+ enterprise backend APIs** in Node.js, integrating diverse databases and external service pipelines at 1.5M+ customer scale.
- Resolved complex processing failures, saving **$300,000+** in third-party billing costs.
- Migrated a **15-year-old legacy .NET service** to a modern Node.js 20 framework.
- Implemented **Auth0 & SSO identity** for user sign-up and login across products.
- Authored service architecture documentation and presentations for company-wide audiences; **mentored a new-grad hire and summer interns**.

Web Development Intern · Scorpion.co

Jul – Sep 2019

- Built a Word-HTML → platform-HTML conversion tool that **boosted team efficiency 280%**; co-built a Chrome extension to convert selected DOM elements to formatted HTML.

Engineering Intern (×2) · Realtor.com

Summers 2017 & 2018

- Built audio-to-text transcription pipelines with **AWS Lambda, Transcribe, Comprehend, and S3**; prototyped proofs of concept across EC2, API Gateway, Firehose, SNS, and CloudWatch.

PROJECTS

LiDAR Navigation Lead · TEECOM SCOUT Autonomous Drone

- Interpreted 360° LiDAR data (RPLidar A3M1) to detect doorways, windows, and hallways and generate **2D room mappings**; developed Python navigation code accounting for flight stability.

IMPACT

$300K+ billing costs recovered

1.5M+ customers served by systems built

280% efficiency gain from internal tooling

7+ enterprise APIs delivered

SKILLS

Languages

JavaScript · Node.js · Python · SQL · Java · C · Bash

Cloud & Data

AWS Serverless · Lambda · S3 · API Gateway · PostgreSQL · MySQL · MongoDB · MS SQL

AI & Architecture

Claude Code Skills · Agentic AI · Event-Driven Systems · RESTful APIs · Auth0 / SSO

Tools & Practices

Docker · Splunk · New Relic · Jenkins · CircleCI · ArgoCD · Swagger · Figma · Agile / Scrum

EDUCATION

Cal Poly, San Luis Obispo

B.S. Computer Engineering

2016 – 2020
